

PowerSyncPro

Integrate. Collaborate. Migrate.

Release Notes

PowerSyncPro Service

Last updated: 21 August 2024

Contents

- Release 3.0 – Current GA..... 3
- Release 2.3 4
- Release 2.2 4
- Release 2.1 5
- Release 2.0 5

Release 3.1 – Development

Features

- Add remote proxy agent capability to proxy sync and password agents through
- Update the installer to support the configuration for remote agents
- Add a dependency on SQL for the PSP service when co-hosting on the same server

Bug fixes

- Ensure that SMTP Domains works consistently in terms of allowing the protocol to be added/removed before checking the domain (for the likes of sip and smtp)

NOTE that upgrading to 3.1 requires you to edit and save every runbook so that the localisation information is added to the runbook

Release 3.0 – Current GA

Features

- Gather user profiles from PSP MA agents
- Sync from Google
- Import/export full config
- Upgrade to .Net 8
- Additional Runbook Status Report
- Add sync profile templates for easier creation of new profiles
- Add remote agent capability for sync to allow syncing between disconnected networks
- Add remote agent capability for sync to allow password syncing without RC4 enabled
- Avoid the use of provisioning packages
- Security hardening following 3rd party penetration testing
- Add EULA acceptance to the installer
- Add support to do migration agent work without changing AD or the tenant (e.g. only changing the hybrid connection) and therefore not needing a translation table
- Provide a clear start and end message for when a runbook completes

- Provide a clear message for when the migration complete popup is shown for a user and when it is dismissed by the user
- Update RBAC to allow the Agent Operator to create and delete batches

Bug fixes

- Allow deletion of computers from a batch
- Change runbook available/start times being before now to warnings
- Fix issue with child Ous where the parent has special characters in its name
- Make the or/and toggle easier to see in complex expressions
- Fix issue with match only profile not saving the sync relationship
- Device queries to Entra ID were getting stuck due to paging issues, no corrected
- Entra joining a device now adds the standard Azure roles depending on tenant configuration

Note that upgrading to 3.0 requires a refresh schema for every directory and then a full import and full sync due to the internal changes in the database and catering for Google

Release 2.3

Features

- Msi installer created
- Add support for export/import of some configuration items
- Sync owners for Azure AD Groups
- Switch to retrieving ObejctGUID instead of DNs for linked attributes

Release 2.2

Features

- Added right click options on the Schedule
- Create a Sync Profile based on another
- Create a Sync Profile based on a template
- Devices imported from Azure AD limited to AADJ devices
- Staging Mode added

- Options added to allow the export of source OU structure to target
- Allow the use of an expression within Complex Expressions
- Make the UI more consistent in terms of sorting and filtering
- Automatically trigger Refresh Schema and Import Containers when creating a directory
- Make complex/simple expressions as case insensitive
- Pull back the PSP Migration Agent, last contact, OS and version

Release 2.1

Features

- Replace the main UI with a more streamlined experience
- Add Single Object Report
- Add the matching criteria to the whatif report
- Implement RBAC model
- Replace WhatIf process with a view into the Export queue directly
- Add map/match tabs to the Sync Profile screen
- Add more context to the messages in the log
- Option to show the object from the log message
- Upgrade to .Net 6
- Allow the use of 'targetValue' in mapping complex expressions

Bugs fixed

- fixed an issue with proxyAddresses processing
- Schedule screen gets confused when there are more than 10 directories

Release 2.0

Features

- Obfuscate the sync code

Bugs fixed

- Azure AD group member not importing when results split over multiple pages returned from graph
- Keep as is on target no longer clears mail related attributes
